**HIGHLIGHTS OF PRESCRIBING INFORMATION**

These highlights do not include all the information needed to use XEPI™ safely and effectively. See full prescribing information for XEPI™.

XEPI™ (ozenoxacin) cream, for topical use

Initial U.S. Approval: 2017

---

**INDICATIONS AND USAGE**

XEPI™ is a quinolone antimicrobial indicated for the topical treatment of impetigo due to *Staphylococcus aureus* or *Streptococcus pyogenes* in adult and pediatric patients 2 months of age and older (1).

---

**DOSEAGE AND ADMINISTRATION**

- **Apply a thin layer of XEPI topically to the affected area twice daily for 5 days (2).**
- **Affected area may be up to 100 cm² in adult and pediatric patients 12 years of age and older or 2% of the total body surface area and not exceeding 100 cm² in pediatric patients less than 12 years of age (2).**
- **For topical use only (2).**
- **Not for oral, ophthalmic, intranasal, or intravaginal use (2).**

---

**DOSEAGE FORMS AND STRENGTHS**

Cream: Each gram contains 10 mg of ozenoxacin (1%) (3).

---

**CONTRAINDICATIONS**

None (4)

---

**WARNINGS AND PRECAUTIONS**

Potential for Microbial Overgrowth: Prolonged use of XEPI may result in overgrowth of nonsusceptible bacteria and fungi. If such infections occur, discontinue use and institute alternative therapy (5).

---

**ADVERSE REACTIONS**

Adverse reactions (rosacea and seborrheic dermatitis) were reported in 1 adult patient treated with XEPI (6.1).

To report SUSPECTED ADVERSE REACTIONS, contact Cutanea Life Sciences, Inc. at 1-844-780-8152 or FDA at 1-808-FDA-1888 or www.fda.gov/medwatch.

---
10 OVERDOSE
Any sign or symptom of overdose, either topically or by accidental ingestion, should be treated symptomatically. No specific antidote is known.

11 DESCRIPTION
XEPI contains ozenoxacin, a quinolone antimicrobial. It is intended for topical use only.

The chemical name of ozenoxacin is 1-Cyclopropyl-8-methyl-7-(5-methyl-6-methylamino-pyridin-3-yl)-4-oxo-1,4-dihydro-quinoline-3-carboxylic acid. Ozenoxacin, a white to pale-yellow crystalline solid, has a molecular formula of C21H21N3O3, and a molecular weight of 363.41. The chemical structure is:

![Chemical structure of ozenoxacin]

Each gram of cream contains 10 mg of ozenoxacin (1% w/w) and the following inactive ingredients: benzoic acid, ceteth-20, pegilcol 5 elate, pegolcol 7 stearate, propylene glycol, purified water, stearyl alcohol.

12 CLINICAL PHARMACOLOGY

12.1 Mechanism of Action
XEPI is an antimicrobial drug [see Microbiology (12.4)].

12.2 Pharmacodynamics
Exposure-Response Relationship
The exposure-response relationship for ozenoxacin following topical application has not been studied, however; a relationship is unlikely because systemic exposure following topical application is negligible [see Clinical Pharmacology (12.3)].

12.3 Pharmacokinetics

Absorption
Four pharmacokinetic studies were conducted in 110 patients utilizing varying strengths of ozenoxacin cream, up to 2% (twice the concentration of the marketed formulation). Three of these studies assessed systemic absorption in healthy subjects and in subjects with impetigo. These studies were conducted with either single or repeated application of up to 1 g of ozenoxacin cream to intact or abraded skin (up to 200 cm2 surface area). No systemic absorption was observed in 84 of 86 subjects, and negligible systemic absorption was observed at the level of detection (0.489 ng/mL) in 2 subjects.

Distribution
Plasma protein binding of [14C]-ozenoxacin was moderate (~80 to 85%) and did not appear to be dependent on concentration. Since negligible systemic absorption was observed in clinical studies, tissue distribution has not been investigated in humans.

Elimination
Metabolism: Ozenoxacin was not metabolized in the presence of fresh human skin discs and was minimally metabolized in human hepatocytes.

Excretion: Studies have not been investigated in humans due to the negligible systemic absorption observed in clinical studies.

12.4 Microbiology
Mechanism of Action
Ozenoxacin is a quinolone antimicrobial drug. The mechanism of action involves the inhibition of bacterial DNA replication enzymes, DNA gyrase A and topoisomerase IV. Ozenoxacin has been shown to be bactericidal against S. aureus and S. pyogenes organisms.

Resistance
The mechanism of quinolone resistance can arise through mutations of one or more of the genes that encode DNA gyrase or topoisomerase IV. Resistant organisms will typically carry a combination of mutations within gyrA and parC subunits. Overall the frequency of resistant mutants selected by ozenoxacin is ≤10-6.

Interaction with Other Antimicrobials
Ozenoxacin has been tested in combination with 17 other commonly used antimicrobial agents against S. aureus and S. pyogenes. Antagonism interactions with ozenoxacin were observed with ciprofloxacin against S. aureus.

Antimicrobial Activity
Ozenoxacin has been shown to be active against most isolates of the following microorganisms, both in vitro and in clinical infections [see Indications and Usage (1)]:

Gram-positive bacteria
- Staphylococcus aureus (including methicillin-resistant isolates)
- Streptococcus pyogenes

13 NONCLINICAL TOXICOLOGY

13.1 Carcinogenesis, Mutagenesis, Impairment of Fertility
Long-term studies in animals to evaluate carcinogenic potential have not been conducted with ozenoxacin.

Ozenoxacin demonstrated no genotoxicity when evaluated in vitro for gene mutation and/or chromosomal effects in the Ames test, mouse lymphoma cell assay, or when evaluated in vivo in a rat micronucleus test with demonstrated systemic exposure.

Oral doses of ozenoxacin did not affect mating and fertility in male and female rats treated up to 500 mg/kg/day (about 8500 and 16,000 times respectively, the maximum human plasma concentration seen with dermal application of ozenoxacin 1% cream).

14 CLINICAL STUDIES
The safety and efficacy of XEPI for the treatment of impetigo was evaluated in two multi-center, randomized, double-blind placebo controlled clinical trials ( Trial 1, NCT01397461) and Trial 2, (NCT02090764). Seven-hundred twenty-three (723) subjects two months of age and older with an affected body surface area of up to 100 cm2, and not exceeding 2% for subjects aged 2 months to 11 years were randomized to XEPI or placebo. Subjects applied XEPI or placebo twice daily for 5 days. Subjects with underlying skin disease (e.g., preexisting eczematous dermatitis), skin trauma, clinical evidence of secondary infection, or systemic signs and symptoms of infection (such as fever), were excluded from these studies.

Overall clinical success was defined as no need for additional antimicrobial therapy of the baseline affected area(s) and absence/reduction in clinical signs and symptoms assessed at the end of therapy (Day 6–7), as follows: absence of exudates/pus, crusting, tissue warmth, and pain; and erythema/inflammation, tissue edema, and itching. Rates were considered as less than mild in Trial 1, absence of blisters, exudates/pus, crusting, and itching/pain, and mild or improved erythema/inflammation in Trial 2. Table 2 below presents the results for clinical response at the end of therapy.

* The success rates for ozenoxacin were significantly different than placebo in Study 1 and Study 2 (p = 0.002 and p = 0.001).

The most commonly identified bacteria were S. aureus and S. pyogenes. Table 3 below presents the results for clinical success at end of therapy in subjects with S. aureus or S. pyogenes at baseline.

16 HOW SUPPLIED/STORAGE AND HANDLING
XEPI cream, 1% is a pale yellow cream supplied in a 30-gram tube. Each gram of cream contains 10 mg of ozenoxacin.

NDC 70363-011-30 (30-gram tube) Store at 20°C – 25°C (68°F – 77°F); excursions permitted to 15°C to 30°C (59°F – 86°F) (See USP Controlled Room Temperature).

17 PATIENT COUNSELING INFORMATION
Advise patients (and/or their caregivers or guardians) using XEPI of the following information and instructions:

- Use XEPI as directed by the healthcare practitioner. As with any topical medication, patients and caregivers should wash their hands after application if the hands are not the area for treatment.
- XEPI is for external use only. Do not swallow XEPI or use it in the eyes, on the mouth or lips, inside the nose, or inside the female genital area.
- The treated area may be covered by a sterile bandage or gauze dressing.
- Use the medication for the entire time recommended by the healthcare practitioner, even though symptoms may have improved.
- Notify the healthcare practitioner if there is no improvement in symptoms within 3 days after starting use of XEPI.
